

MONOPRINTING A CALICO BAG

Monoprinting is a simple technique to create an effective background colour to your fabric.

Place dots of Idea Fabric Colour in a line / pattern on the acetate sheet.

Put a second acetate sheet over the colour and press with your finger. Separate the acetate sheets and place the sheet design side down onto your fabric.

Press evenly on the back for good contact between image and fabric. This transfers the colour from the acetate sheet onto your fabric.

Using a paint brush, colour the handles of the bag with Idea Fabric Colour.

Let dry for 24 hours then iron to make it colourfast.

Clean up in water.
