

# SUBLIMATION OF COLOUR WITH COLOURCRAFT TRANSFER PAINTS AND DYES

There are a number of ways this product can be used.

- 1.Brush the colour directly from the jar onto cartridge paper – solid block of colour
- 2.Paint your own design/image onto cartridge paper.
- 3.Paint over a photocopied image (not suitable for laser prints).

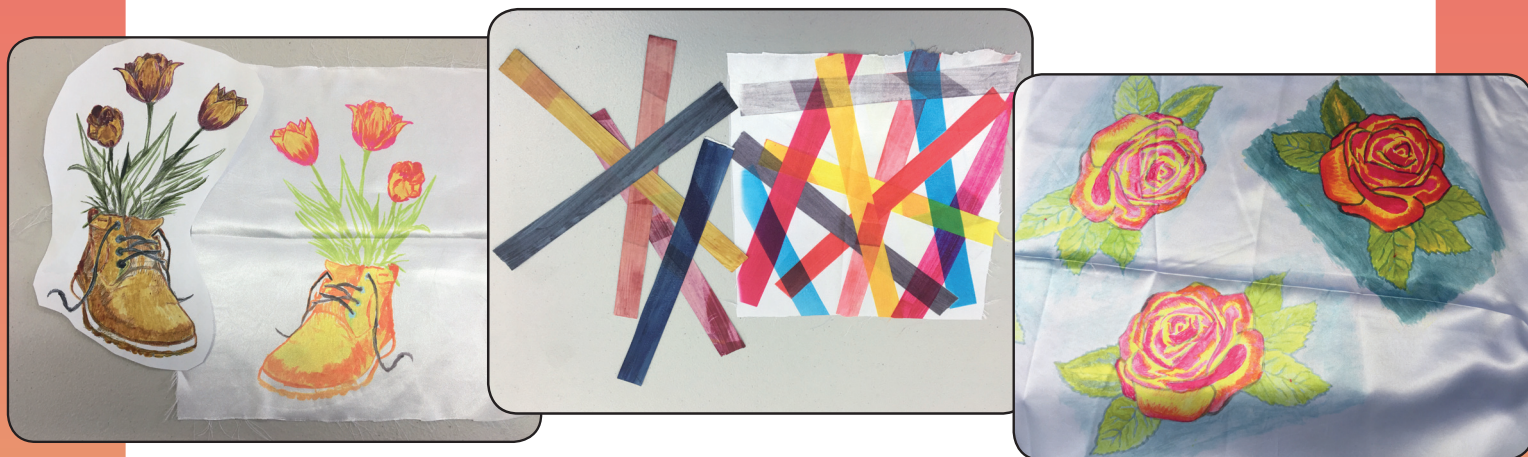

The colours will dry dull on the paper.

Ensure paint is dry on the paper before you begin (you can dry the paint with a hair dryer to hasten the process).

Place your painted paper face down onto any fabric surface and press with an iron. Colours will transfer brighter onto synthetic fabrics.

The heat will transfer the painted image from the paper onto the fabric surface.

If using a solid block of colour you can place items onto the fabric surface to block out the colour. Eg.leaves, paper cut outs, lace etc and work into these with other mediums.
