

# SCREEN PRINTING

## SPEEDBALL DRAWING FLUID AND SCREEN FILLER

- Draw your image lightly onto the front of your screen (leave 5cm margins)
- Using the Speedball drawing fluid and a paintbrush paint your desired image
- Let screen dry completely
- On the same side as the drawing fluid, carefully drizzle a small amount of Speedball screen filler along one end of your frame
- With a single pass of your squeegee coat the entire screen including your painted image
- Do not overwork as it will dissolve some of the drawing fluid
- Let dry
- Rinse your screen from front and back with cold water so the blue drawing fluid washes out revealing your painted stencil
- Let dry
